Projects

Sport Event Finder | Full Stack Coding Bootcamp Project Manager

- My team and I created an application that allows a user to search for sporting events that were occurring on a specific date in a specific city.
- My role was to utilize JavaScript to ensure the application was interactive. I also made fetch requests to 3rd party APIs and analyzed its data.

Work Day Scheduler

- I created an app that obtained and displayed the current date and time. A user could interact with a series of text inputs to plan their daily activities. Additionally, the text input boxes would change color based on the time of day to signal to the user about past, current, and future activities.

Random Password Generator

- I created an app that a user could activate to generate random passwords. Upon activation, the user would be prompted to select a series of parameters, which would then influence the resulting generated password that would be displayed.

TECHNICAL SKILLS | COMMUNITY ENGAGEMENT | LICENSURES & CERTIFICATIONS

- I used JavaScript, HTML, CSS, and Bootstrap to create my projects.

Education

Edison High School, Minneapolis, MN

High School Diploma (2007)

University of Minnesota – Twin Cities Campus

Bachelors of Science - Biology
